The application supports several Locks simultaneously. For a Lock that has not been paired, the default password is 123456 until a mobile device is added as an administrator.

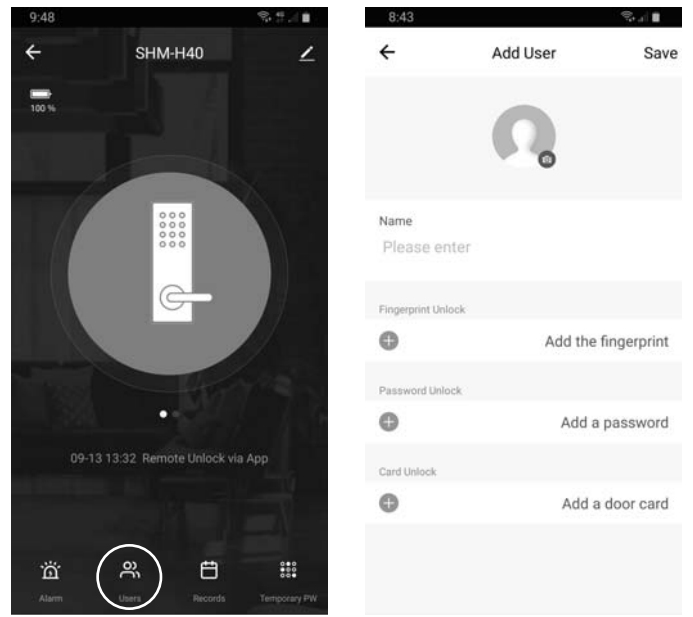

Lock Linking

- 01 - Download **TUYA SMART** from AppStore (IOS) or Google Play (Android)
- 02 - Install the application.
- 03 - Register a new user (email or phone).
- 04 - Validate your account, you will receive an email or an SMS.
- 05 - Enter the application and select "+ Add Device".
- 06 - In the category "Video Surveillance" select "WiFi Lock".
- 07 - Select your Local Network, it must be a 2.4GHz WiFi, and enter the password.
- 08 - Add an Administrator in the lock (see page 3).
- 09 - When the APP asks for confirmation, touch the lock panel and enter 2 #
- 10 - Validate your identity with your fingerprint or administrator password to register the lock on the Web.
- 11 - Assign a name for the lock.
- 12 - The lock is ready to use.

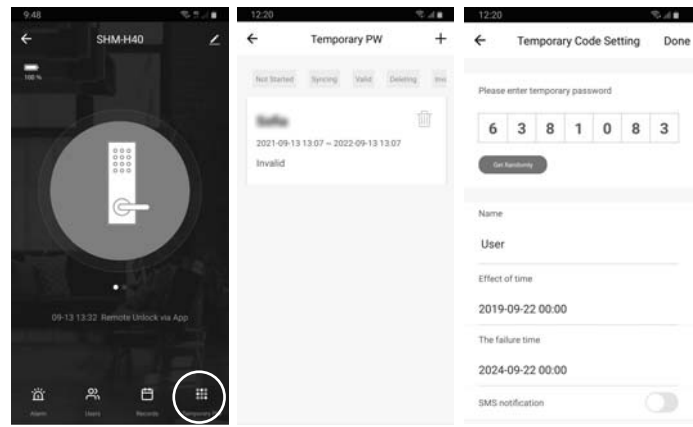

Add Users

You can add two types of users, FAMILY and OTHERS. Users of the FAMILY category have full control over all the locks in the group. Users in the OTHERS category only have access permissions to a particular lock. From the user panel you can edit the name, photo, password, card and fingerprint.

Add Temporary Passwords

Temporary keys allow you to remotely enable access, you can generate a random key or specify it in the APP. You must press 5 # on the lock to start using it.

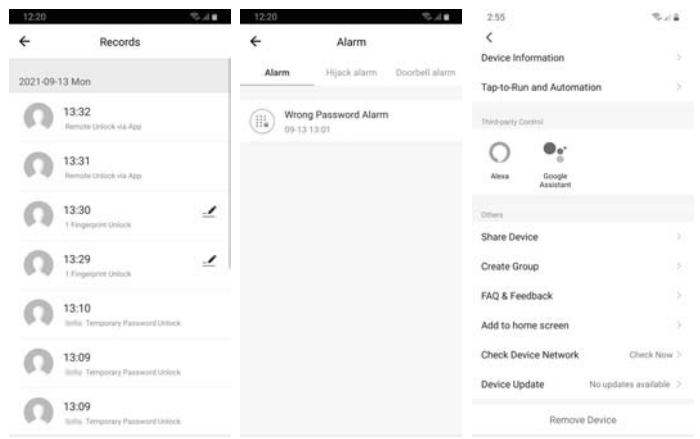

Remote Open

You can request remote opening from the lock by pressing 4 #. The APP displays a notification to authorize the opening.

Data Management

From the application you can access the income register of your Lock, update the firmware, adjust the internal clock, modify the sound, unlink the Lock, etc.

Technical Specifications
